

Generally speaking, a majority of the project was done together/simultaneously, but each person did their fair share

Responsibilities are outlined below based on person and on parts

Part 1:

- Both of us worked simultaneously on creating the ER diagrams together in draw.io
- Work was done together on voice calls while we both worked on drawing arrows as well as outline the different tables

Part 2:

- Both of us worked on the Relational Schemas as well as the queries themselves.
- Matthew was primarily responsible for creating the relational schemas and the basic outlines for the queries while Zaf focused mainly on the queries themselves, making sure everything fit together including the inserts for populating the database and the selections for the queries required

Part 3:

Matthew Maung

- Matthew worked specifically on building the html templates and styling them, as well as making sure the paths outlined in flask worked correctly.
- Majority of the coding for rendering views from the databases
- Matthew focused more on the main ui that you're seeing, including the registration and login forms
- Did a lot of debugging and integration of newer code

Zaf Nazir

- Zaf specifically worked on making sure the queries matched the specifications of the project and it was integrated well into the python file
- Coding portion on spending and revenue for both customer and staff
- Made sure the html files were correctly called and functioned with the python file
- Debugged the section on review for customers and maintenance for staff

Both

- Overall debugging of code
- Adding of functionalities and coding in general
- Testing of use cases
- Populating of databases(to ensure our code works)
